[Principles of Systematic Zoology Jul 21 2020](#) This text is intended for senior or postgraduate courses in systematics, particularly animal taxonomy. Practical suggestions for taxonomic practice are included and explanations of the basic concepts of taxonomy are emphasized as well as the definition of traditional terms used in taxonomy. The treatment of taxonomy is in two parts. Part A is devoted to microtaxonomy and Part B is devoted to macrotaxonomy. There is a new chapter on the methods of numerical taxonomy, and an extensive treatment of the new approaches in taxonomy synopsis may belong to another edition of this title.

[How Zoologists Organize Things Mar 29 2021](#) Humankind's fascination with the animal kingdom began as a matter of survival – differentiating the edible from the toxic, the ferocious from the tractable. Since then, our compulsion to catalogue wildlife has played a key role in growing our understanding of the planet and ourselves, inspiring religious beliefs and evolving scientific theories. The book unveils wild truths and even wilder myths about animals, as perpetuated by zoologists – revealing how much more there is to learn, and unlearn. Animals were among the first subjects ever drawn by humans. Long before Darwin or Watson and Crick, our ancestors studied the visual similarities and differences between the creatures which inhabit the Earth alongside us. Early savants could sense there was an order, a scheme, which unified all life. The schemes they formulated often tell us as much about ourselves as they do about the animals depicted, highlighting obsessions, fears, revelations and hopes. The human quest to classify living beings has left us with a rich artistic legacy in four great stages—the folklore and religiosity of the ancient and Medieval world; the naturalistic cataloging of the Enlightenment; the evolutionary trees and maps of the nineteenth century; and the modern, computer-hued classificatory labyrinth. The aim of this book is to tell the story of our systematization of the beasts. These charts of the zoological world parallel prevailing artistic trends and scientific discoveries, woven together with philosophical threads that run throughout: animal life as parable, a tree, a maze, a terra incognita, a mirror upon ourselves.

**The Question of Animal Culture** Aug 02 2021 Fifty years ago, a troop of Japanese macaques was observed washing sandy sweet potatoes in a stream, sending ripples through the fields of ethology, comparative psychology, and cultural anthropology. The issue of animal culture has been hotly debated ever since. Now Kevin Laland and Bennett Galef have gathered key voices in the often rancorous debate to summarize the views along the continuum from “Culture? Of course!” to “Culture? Of course not!” The result is essential reading for anyone interested in the validity of animal culture, and what it might say about our own.

*Thinking with Heidegger* Aug 22 2020 "... a real philosophical page-turner, a book that is difficult to put down, even given the complexity of its issues." -- Jeffrey Powell "This is a fine addition to existing books on Heidegger's thought.... The author has both a command of Heidegger and of how best to elucidate him to a contemporary audience." -- David Wood In *Thinking with Heidegger*, Miguel de Beistegui looks into the essence of Heidegger's thought and engages the philosopher's transformative thinking with contemporary Western culture. Rather than isolate and explore a single theme or aspect of Heidegger, de Beistegui chooses multiple points of entry that unfold from the same question or idea. De Beistegui examines Heidegger's translations of Greek philosophy and his interpretations and displacements of anthropology, ethics and politics, science, and aesthetics. *Thinking with Heidegger* proposes fresh answers to some of philosophy's most fundamental questions and extends Heideggerian discourse into philosophical regions not treated by Heidegger himself.
