A young boy paints the flight of a hummingbird as it zips, loops, and zigzags around his garden. Technical exercises and warm-ups carefully prepared to fit precisely with materials presented in the Lesson Books. Each exercise is coordinated page-by-page with the Prep Course Lesson Books. From the creator of the bestselling Anti-Coloring Book series with more than 600,000 copies sold, a new parenting guide to encouraging creativity in preschool-age children Young at Art is the first and only comprehensive book for the general audience about the nature, value and impact of art on very young children. Directed towards parents and educators of one to five year olds, Susan Striker explains why children's art is not a frill, but the very foundation upon which all later fundamental skills are built. She drives home the idea that encouraging children's artistic growth will have beneficial effects on all other aspects of their emotional and intellectual development. At the core of this practical guide is the understanding that art is an important tool in teaching young children crucial concepts related to self-expression, reading and writing. As opposed to more structured exercises, such as coloring on dittos and underlining pictures in workbooks, Striker stresses that scribbling and free drawing experiments are the most important art activities a child can engage in; they better prepare children to read independently as they grow. Young at Art provides descriptions for age-appropriate art activities, tips for carrying them out safely, and helps parents recognize what a child's art work should look like at each stage of development. With Young at Art, parents will develop realistic expectations of their children's work, learn how to speak to their children about their art, and facilitate skills well beyond their creativity that will benefit children. Humankind has always sought out innovative and new ways of waging war, establishing new forms of warfare. Set against a background of global strategic instability this process of innovation has, over the last two decades, produced a new and complex phenomenon, hybrid warfare. Distinct from other forms of modern warfare in several key aspects, it presents a unique challenge that appears to baffle policymakers and security experts, while giving the actors that employ it a new way of achieving their goals in the face of long-standing Western conventional, doctrinal, and strategic superiority. The Hybrid Age analyses the phenomenon of hybrid warfare through theoretical frameworks and a range of global case studies from the 2006 Lebanon War to the Russian intervention in Ukraine in 2014. This book aims to establish a unified theory of hybrid warfare, which not only outlines what the term means, but also places it in its context, and provides the tools which enable an observer to identify and react to a future instance of hybrid warfare.

This report is one of a series of reviews, commissioned by the Chancellor of the Exchequer, to

accompany the pre-Budget report 2006 (to be published 6 December 2006, Cm. 6984, ISBN 0101698429). It sets out recommendations to reform the planning system in England in support of sustainable economic growth and prosperity, whilst securing delivery of wider objectives including promoting community involvement, supporting local democracy and enhancing the environment. Key issues identified include the need: to ensure the planning system is more responsive to the market whilst delivering sustainable development; to ensure the appropriate use of land and to better manage the growing demand for development land; to streamline the planning system to increase certainty, reduce complexity and costs; to enhance the speed and quality of local authority decision-making; and to improve the appeals system to reduce delays. Recommendations include: the introduction of a new system for dealing with major infrastructure projects, based around national Statements of Strategic Objectives, and with a new independent Planning Commission to determine applications; the promotion of a positive planning culture within the plan-led system so that applications should be approved unless there is good reason to believe that the environmental, social or economic costs will exceed respective benefits; encouraging planning bodies to review their green belt boundaries to promote sustainable new development beyond towns and cities; and removal of the need for minor commercial developments that have little wider impact to require planning permission.
