Electrospinning is a technique used to produce nanofibres from a polymer solution using an electrostatic force. The technology is now being used to create materials for a wide variety of uses from tissue engineering and 3D printing to packaging materials and electronic sensors. This new book focusses on the recent developments in their design, process parameters and polymers-selection to enable the commercial applications of electrospinning. The initial chapters introduce the technique and then specific chapters focus on the different application areas showing the various approaches for successful implementation of this fabrication process towards commercialization from basic research and development. The book will be suitable for graduate students, academics and industrial entrepreneurs in materials science, polymer science and chemical engineering as well as those interested in the energy and health applications of the materials. A business development tool for professionals, marketers, sales

directors, consultants and strategists seeking to understand and reach middle market American companies. It covers important business sectors, from InfoTech to health care to telecommunications. Millions of computers around the world today are connected by the Internet, so why is it still so hard to hook up a few PCs in you own home? Whether you want to share an Internet connection, install WiFi, or maybe just cut down on the number of printers you own, home networks are supposed to help make your life easier. Instead, most aspiring home networkers get lost in a confusing maze of terms and technologies: 802.11g, Fast Ethernet, Cat 5 cable (or was it Cat 5e?), Powerline, and on and confusingly on. That's where "Home Networking: The Missing Manual" comes in. Using clear language, straightforward explanations, and a dash of humor, this book shows you how to do everything you need to set up a home network. Coverage includes: WiFi, Ethernet, or Powerline? There are several kinds of digital pipes that you can use to create your network, and none of them have friendly names. This book tells you what they are, explains the pros and cons of each, and helps you figure out what you need to buy, and how to install it. Windows and Mac info included. Half the battle in home networking takes place after you've bought your gear and plugged it in. That's because the routers, network adapters, and cables that you need get you only part way towards networking nirvana. Whether you've got PCs or Macs or both, you'll need help tweaking your computers' settings if you want to get all your machines talking to each other. This book covers most known operating system flavors, including Windows XP, 2000, Me, and 98, and Mac OS X and OS 9. Fun things to do with your network. The real fun starts once your network is up and running. This book shows you how to do much more than simply share an Internet connection and a printer. You'll learn how to stream music from your PCs to your stereo, how to display pictures on your TV, how to hook up game

consoles to your network, and more! Most important, this book helps you understand the difference between what you need to know to create and use your home network and what's best left to those looking for a career as a system administrator. In "Home Networking: The Missing Manual" you'll find everything you need to get your network running--and nothing more. Lightness, efficiency, durability and economic as well as ecological viability are key attributes required from materials today. In the transport industry, the performance needs are felt exceptionally strongly. This handbook and ready reference covers the use of structural materials throughout this industry, particularly for the road, air and rail sectors. A strong focus is placed on the latest developments in materials engineering. The authors present new insights and trends, providing firsthand information from the perspective of universities, Fraunhofer and independent research institutes, aerospace and automotive companies and suppliers. Arranged into parts to aid the readers in finding the information relevant to their needs: * Metals * Polymers * Composites * Cellular Materials * Modeling and Simulation * Higher Level Trends

These profiles and details on over 500 middle market firms are pulled from our extensive company and industry databases. We also include a business glossary and a listing of business contacts, such as industry associations and government agencies. Next, we profile hundreds of

leading middle market companies. Our company profiles include complete business descriptions and up to 27 executives by name and title. Purchasers of either the book or PDF version can receive a free copy of the company profiles database on CD-ROM, enabling key word search and export of key information, addresses, phone numbers and executive names with titles for every company profiled. This book presents fundamental passive optical network (PON) concepts, providing you with the tools needed to understand, design, and build these new access networks. The logical sequence of topics begins with the underlying principles and components of optical fiber communication technologies used in access networks. Next, the book progresses from descriptions of PON and fiber-to-the-X (FTTX) alternatives to their application to fiber-to-the-premises (FTTP) networks and, lastly, to essential measurement and testing procedures for network installation and maintenance. An Instructor's Manual presenting detailed solutions to all the problems in the book is available from the Wiley editorial department. Vault brings the insider approach to the telecom and wireless industry. Providing business profiles, hiring and workplace culture information on more than 25 top employers, including AT&T, Cingular, Nextel, Verizon and more. There are more than one Billion cars on Earth today. Sometime around the year 2030 that number will be two Billion. Frantic growth of automobile traffic comes at a price. World energy infrastructure will be stressed to find enough energy to power such an expanded fleet. Taking the path of least resistance by scaling up hydrocarbon fuel production aggravates the already serious risk of global warming due to massive CO₂ production planet-wide. Pollution will be worsened and political instability within stressed populations will become ever more prevalent. All of these concerns are widely recognized and many initiatives have been taken to mitigate the worst consequences of runaway environmental degradation caused by automotive traffic. Interested parties are evaluating a wide range of options including public transit, smart highways, improved hydrocarbon engine efficiency, hybrid vehicles

and all electric vehicles. Manufacturing the vehicles and building the roads on which expanded traffic will flow adds another dimension to the challenge facing communities in coming years. However, the prospect of new production and new infrastructure creates an opportunity. If the vehicles and roadways are organized and built with all of the issues associated with traffic expansion in mind, a better overall solution may be forthcoming. This treatise lays out a plan for developing an all electric traffic system called Global RAPid Transit InfraStructure (GRATIS) that was written as a solution to the challenges facing transportation systems in the year 2030. The intention is to bolster confidence and stimulate investment along the lines proposed. In addition, a systematic plan to address future transportation needs via GRATIS development provides an example and takes some of the mystery out of thinking about choices we face. In the USA, 120 Million workers spend on average one hour daily commuting. Considering lost productivity and the deleterious health effects of stressful travel, we may value that time at ten dollars per hour. An annual cost of 0.3 trillion dollars is incurred and adding non-commuting travel cost leads to a conservative estimate of 0.6 trillion dollars per year. By cutting travel time in half, GRATIS will save Americans 0.3 trillion dollars per year. GRATIS vehicles are designed to move back and forth seamlessly from legacy surface roads to GRATIS roadways. A passenger enters vehicle at home and exits within easy walking distance of the workplace or other destination. Travel time is reduced by; increased velocity on roadways, comprehensive integration of interconnected roadways to eliminate stop and go effects, pervasive urban penetration, ample parking and integration of parking with destination access. GRATIS also embodies high speed long distance travel. Supporting technologies include; linear induction motors for 2 axis drive, levitation, vehicle-in-motion battery charging, high strength-to-weight roadway enclosures, means of reducing air pressure surrounding long distance high speed trains, means of launching aircraft carrying GRATIS compatible passenger modules, broad band communications with vehicles in

motion and individually optimized trips. A market research guide to the telecommunications industry - a tool for strategic planning, competitive intelligence, employment searches or financial research. It includes a chapter of trends, statistical tables, and an industry-specific glossary. It also provides profiles of the 500 successful companies in telecommunications.
