We are at a tipping point in retail history. While consumers are profiting from the convenience of instant gratification, rapidly advancing technologies are transforming the way goods are transported and displacing workers in ways never before seen. In *Arriving Today*, Christopher Mims goes deep, far, and wide to uncover how a single product, from creation to delivery, weaves its way from a factory on the other side of the world to our doorstep. He analyzes the evolving technologies and management strategies necessary to keep the product moving to fulfill consumers' demand for "arriving today" gratification. Mims reveals a world where the only thing moving faster than goods in an Amazon warehouse is the rate at which an entire industry is being gutted and rebuilt by innovation and mass shifts in human labor practices. He goes behind the scenes to uncover the paradoxes in this shift—into the world's busiest port, the cabin of an 18-wheeler, and Amazon's automated warehouses—to explore how the promise of "arriving today" is fulfilled through a balletic dance between humans and machines. The scope of such large-scale innovation and expended energy is equal parts inspiring, enlightening, and horrifying. As he offers a glimpse of our future, Mims asks us to consider the system's vulnerability and its resilience, and who shoulders the burden, as we hurtle toward a fully automated system—and what it will mean when we are there. The instant New York Times bestseller, now available in paperback and featuring a new afterword from the author—the insider's guide to the Facebook/Cambridge Analytica scandal, the inner workings of the tech world, and who really runs Silicon Valley "Incisive.... The most fun business book I have read this year.... Infrastructure engineers use a software version of this "chaos monkey" to test online services' robustness—their ability to survive random failure and correct mistakes before they actually occur. Tech entrepreneurs are society's chaos monkeys. One of Silicon Valley's most audacious chaos monkeys is Antonio García Martínez. After stints on Wall Street and as CEO of his own startup, García Martínez joined Facebook's nascent advertising team. Forced out in the wake of an internal product war over the future of the company's monetization strategy, García Martínez eventually landed at rival Twitter. In *Chaos Monkeys*, this gleeful contrarian unravels the chaotic evolution of social media and online marketing and reveals how it is invading our lives and shaping our future. The creator of YouTube's ColdFusion explores the development of technology from Industrial Revolution to Artificial Intelligence to figure out what's next. As each new stage of technology builds on the last, advancements start to progress at an exponential rate. In order to know where we're headed, it's essential to know how we got here. What hidden stories lie behind the technology we use today? What drove the men and women who invented it? What were those special moments that changed the world forever? Dagogo Altraide explores these questions in a history of human innovation that reveals how new technologies influence each other, how our modern world came to be, and what future innovations might look like. From the electric world of Tesla and the steam engine revolution to the first computers, the invention of the internet, and the rise of artificial intelligence, *New Thinking* tells the stories of the men and women who changed our world with the power of new thought. The international bestseller from award-winning writer Mark Schatzker that reveals how our dysfunctional relationship with food began—and how science is leading us back to healthier living and eating. For the last fifty years, we have been fighting a losing war on food. We have cut fat, reduced carbs, eliminated sugar, and attempted every conceivable diet only to find that eighty-eight million American adults are prediabetic, more than a hundred million have high blood pressure, and nearly half now qualify as obese. The harder we try to control what we eat, the unhealthier we become. Why? Mark Schatzker has spent his career traveling the world in search of the answer. Now, in The End of Craving, he poses the profound question: What if the key to nutrition and good health lies not in resisting the primal urge to eat but in understanding its purpose? Beginning in the mountains of Europe and the fields of the Old South, Schatzker embarks on a quest to uncover the lost art of eating and living well. Along the way, he visits brain scanning laboratories and hog farms, and encounters cultural oddities and scientific paradoxes—northern Italians eat what may be the world's most delicious cuisine, yet are among the world's thinnest people; laborers in southern India possess an inborn wisdom to eat their way from sickness to good health. Schatzker reveals how decades of advancements in food technology have turned the brain's drive to eat against the body, placing us in an unrelenting state of craving. Only by restoring the relationship between nutrition and the pleasure of eating can we hope to lead longer and happier lives. Combining cutting-edge science and ancient wisdom, The End of Craving is an urgent and radical investigation that "charts a roadmap not just for healthy eating, but for joyous eating, too" (Dan Barber, New York Times bestselling author of The Third Plate). Perfect for middle- and high-school students and DIY enthusiasts, this full-color guide teaches you the basics of biology lab work and shows you how to set up a safe lab at home. Features more than 30 educational (and fun) experiments.
