Practicing Feminist Mothering explores the realities of feminist mothering for both mothers and their children. It scrutinizes the discourse of motherhood by examining the material spaces that feminist mothers create to struggle with patriarchy. The book is based on in-depth interviews of sixteen feminist mothers and their adult children, one of whom is now a mother. Conducted from 1995 to 2007, they provide a rich understanding of the tensions within feminism surrounding issues of mothering and the reproduction of feminism itself. It illuminates the complexities of generational dynamics by exploring how the children mothered by self-conscious feminists think of feminism and mothering in their adult lives. By developing concepts of matroreform and motherlines, this book provides a powerful perspective on mothering as a central aspect of feminism. This book analyses the challenges of secrecy in security research, and develops a set of methods to navigate, encircle and work with secrecy. How can researchers navigate secrecy in their fieldwork, when they encounter confidential material, closed-off quarters or bureaucratic rebuffs? This is a particular challenge for researchers in the security field, which is by nature secretive and difficult to access. This book creatively assesses and analyses the ways in which secretaries operate in security research. The collection sets out new understandings of secrecy, and shows how secrecy itself can be made productive to research analysis. It offers students, PhD researchers and senior scholars a rich toolkit of methods and best-practice examples for ethically appropriate ways of navigating secrecy. It pays attention to the balance between confidentiality, and academic freedom and integrity. The chapters draw on the rich qualitative fieldwork experiences of the contributors, who did research at a diversity of sites, for example at a former atomic weapons research facility, inside deportation units, in conflict zones, in everyday security landscapes, in virtual spaces and at borders, bureaucracies and banks. The book will be of interest to students of research methods, critical security studies and International Relations in general. Allan Moffat is one of the legends of Australian motor sport. His extraordinary driving career, which lasted from the mid-1960s to the late 1980s, coincided with the heyday of touring car racing. His achievements included 32 Australian Touring Car wins, four of them at Bathurst, and four Championships. His Trans Am Mustang, surely the definitive racing touring car of all time, claimed more than 100 victories. But Moffat's impact went well beyond the winner's podium. He brought a new level of business professionalism to motor racing, pioneering the use of sponsorship in a way that would change the sport forever. Moffat, intense, reserved and driven, has been known as a man of few words. For years motor-sport fans have wanted to hear his story, and now Allan is telling it for the first time. His book is the compelling account of a young Canadian who moved to Australia with his family as a boy and became one of our greatest racing drivers. It's a tale of the epic rivalry with Peter Brock, which surprisingly culminated in a driving partnership and huge mutual respect, and it's about nostalgia for the glory days of motor sport in this country, when the concept of Holden versus Ford really did divide the nation, and when Mount Panorama was the true Mecca for hundreds of thousands, if not millions, of Australians. Filled with intense rivalries, huge egos, on-course stories and incidents, and all against the backdrop of our motor sport history over more than forty years, this is THE book for all fans of Australian motor

racing. This Guide is a detailed overview of all aspects of IPR and protection in China. Katelyn Wolfraum was a MI6 agent with a promising career carving up Nazis until one little "Oops" had the King of England place a shoot-on-sight order on her pretty red head and sent her underground. A few years later, with the Third Reich overrunning the free world, Kat ends up trapped hundreds of hellish North African desert miles behind enemy lines with a motley group of misfits. As they work their way back to friendly lines, they team with "The Long Range Desert Group." Together, they begin a terror campaign against the Germans, shattering Rommel's supply lines, scalping Nazis and driving the Gestapo and SS crazy. Ultimately, Kat gets a chance to redeem herself when she stumbles upon Hitler's plan to use the most powerful Wunderwaffe in the history of warfare. But she has a small problem... How can a disgraced and wanted ex MI6 assassin convince the British Command that Hitler is about to win the war... This textbook explores probability and stochastic processes at a level that does not require any prior knowledge except basic calculus. It presents the fundamental concepts in a step-by-step manner, and offers remarks and warnings for deeper insights. The chapters include basic examples, which are revisited as the new concepts are introduced. To aid learning, figures and diagrams are used to help readers grasp the concepts, and the solutions to the exercises and problems. Further, a table format is also used where relevant for better comparison of the ideas and formulae. The first part of the book introduces readers to the essentials of probability, including combinatorial analysis, conditional probability, and discrete and continuous random variable. The second part then covers fundamental stochastic processes, including point, counting, renewal and regenerative processes, the Poisson process, Markov chains, queuing models and reliability theory. Primarily intended for undergraduate engineering students, it is also useful for graduate-level students wanting to refresh their knowledge of the basics of probability and stochastic processes.
